

Make Windows 10 look like Windows 7 and How to setup Cortana in Windows 10

To all;

Here is an excerpted article in a Word format that describes what you need to do to make Windows 10 look like Windows 7. You need to first download Classic shell and install it. This attached word document also discusses how to setup or remove Cortana from Windows 10. Cortana is windows answer to Siri from Apple.

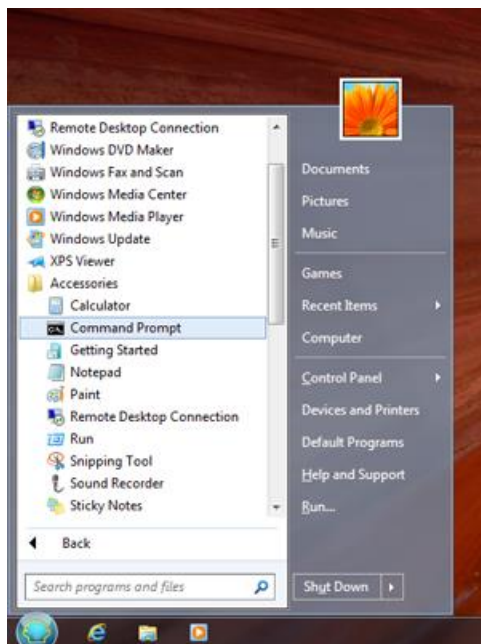

Here is a web link to download more background themes for Windows 10. I like Autumn color in Japan and the Australian Landscapes:

http://windows.microsoft.com/en-US/windows/themes?ocid=w8_client_themes

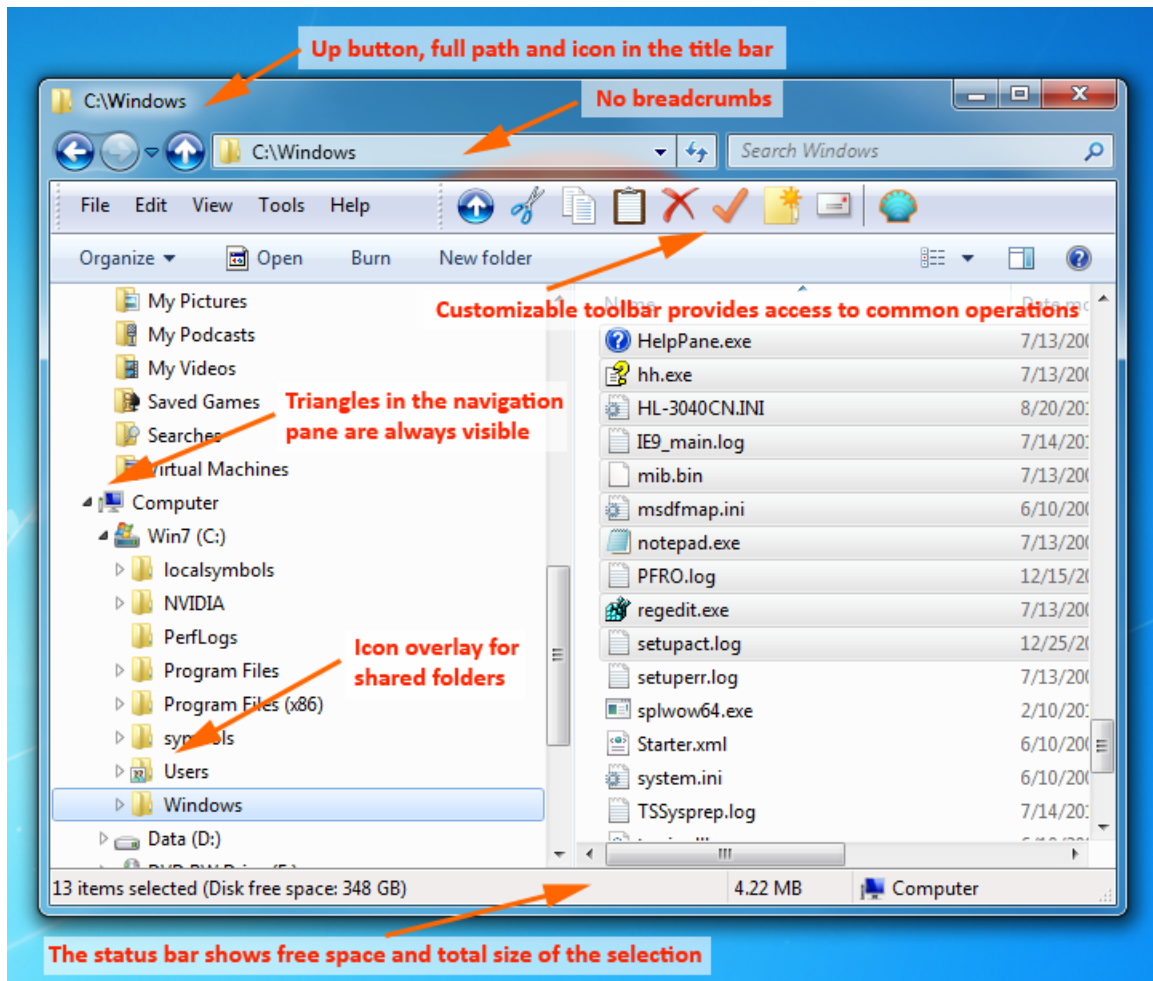

Here is link to the Classic shell site: The latest version is 4.2.4

<http://www.classicshell.net/>

Here is what the new Start menu will look like:

Here is what windows Explorer will look like:
